
Your Goal:
Provide data-based recommendations to solve a business problem
Identify the Problem
Import the Data
Full Data
Exploratory Analysis and Data Cleaning
Split Full Data into Train and Test Subsets
Training Data
Testing Data
Pre-process Training Data
"Fit", "Train", "Estimate" are synonyms
Fit Model(s) on Training Data
Pre-process Testing Data
Pre-processing Recipe is used in these places
Evaluate Predictive Accuracy of Model(s) on Testing Data
Identify the Model with the Best Predictive Fit (lowest RMSE or MAE = highest accuracy)
Simulate Counterfactual Data
Pre-process Counterfactual Data
Generate Counterfactual Predictions Using the Best Model
Evaluate and Interpret Parameter Estimates from the Best Model
Communicate Recommendations
